

REMARKS

This is in response to the Office Action dated September 11, 2007 and is filed in connection with a Request for Continued Examination.

In the Office Action, there were objections and rejections to the claims 1 and 2 based upon their language. There was also a rejection under 35 U.S.C. § 101.

With this response, new claims 3-7 are submitted. It is believed that these claims overcome the objections and rejections of cancelled claims 1 and 2.

Applicant notes that generally, a Chinese character is composed of at least one stroke and/or at least one component. A component is composed of at least one stroke. The Chinese language has about 40,000 characters, while the number of strokes may be several dozens. Therefore, displaying a whole Chinese character by displaying each stroke or component requires less resource than displaying this character directly.

For a mobile device having limited memory space, displaying a Chinese character by displaying each stroke or component can achieve advantage that the requirement to the memory space is lowered and a perfect appearance of the character displayed is maintained.

Reconsideration and favorable action are respectfully requested.

The Director is authorized to charge any fee deficiency required by this paper or credit any overpayment to Deposit Account No. 23-1123.

Respectfully submitted,

WESTMAN, CHAMPLIN & KELLY, P.A.
